Summary

Highly motivated Electronics and Communication Engineering student with a robust foundation in AI/ML, embedded systems, and high-performance computing, eager to contribute to innovative advancements in semiconductor technology and accelerated computing solutions. Proven ability to architect, engineer, and deploy complex projects involving real-time data processing, machine learning models, and efficient hardware-software integration. Proficient in Python, C/C++, Embedded C, and Linux environments, pursuing to leverage expertise in a challenging software or hardware development role.

Skills

Languages Python, C/C++, Embedded C

Web Dev HTML, CSS, JavaScript

OS ROS, ArchLinux, Kali-Linux, Ubuntu

Database SQL, MongoDB

Interests OpenCV, MATLAB, Proteus, Raspberry PI

Experience

MyCTO Innovations

May 2024 – June 2024

SEO Content Writer (Intern)

- Designed and optimized web content using advanced SEO techniques, generating a measurable increase in organic search traffic and search engine ranking.
- Conducted keyword research and analysis to identify content gaps and opportunities, directly contributing to the site's visibility strategy.
- Collaborated with the marketing team to facilitate content alignment with brand voice and campaign goals.

TechEntia

October 2024 – December 2024

Assistant Content Developer

- Executed end-to-end content development cycles, from ideation to publication, focusing on SEO-rich technical topics.
- Utilized Figma to design and integrate visual assets, enhancing user engagement with published content.
- Fostered cross-functional team environment, enhancing problem-solving and project ownership skills.

Education

ABES Engineering College, Ghaziabad

2022 - 2026

Bachelor of Technology (Electronics and Communication Engineering)

CGPA: 8.02

Sunbeam School Lahartara, Varanasi

2019 - 2020

Senior Secondary Education (PCM)

Percentage: 81%

Extracurricular Activities

MINERVA: LitSoc of ABESEC

May 2023 – Present

- Planned and executed over 10 inter-college events, including debates and Model UNs, honing leadership and project management abilities.

Content Developer at TEDxABESESEC'24

Mar 2024 – Jul 2024

- Reviewed, edited, and developed scripts and promotional materials, maintaining content quality for a high-profile event.

Projects

Smart Parking Spot Detector using LoRa-32 and IR Sensor

- Implemented a real-time smart parking detection system using IR sensors and LoRa-32 modules for low-power, long-range wireless data transmission.
- Developed a cloud-connected backend and a user-facing application to display live parking availability.

Locally Hosted Private AI Server

- Deployed a secure, private AI server on a Linux-based Oracle Virtual Machine, utilizing the Llama2 Large Language Model for local and private model inference.
- Integrated the model with Open WebUI to establish an intuitive and accessible interface for AI experimentation.

Tuberculosis Detection AI Model

- Engineered an 86% accurate diagnostic tool using a Convolutional Neural Network (CNN) in Python, TensorFlow, and Keras to classify medical imagery.
- Developed an interactive front-end interface with Streamlit for easy model interaction and result visualization.
